FUNCTIONAL SPECIFICATION

Delivery Analysis Report – ZSD_DEL_REPORT

1. Document Information

Field	Description
Project	Delivery Analysis Report
Module	Sales & Distribution (SD)
Object Type	Custom ABAP Report
Report Name	ZSD_DEL_REPORT
Version	1.0
Prepared By	Gayathri
Date	27/06/2026

2. Objective

The objective of this development is to create a custom ABAP report that displays Delivery details – Header, Item, Customer, Material, and Plant information – in a single consolidated output based on user-entered selection criteria.

3. Business Requirement

The business requires a single-screen report to analyze Delivery information. Currently, business users must access multiple SAP transactions (VL03N, VA03, MM03) to retrieve delivery-related data, which is time-consuming and does not provide a consolidated view.

The report must combine data from the Delivery Header, Delivery Item, Customer Master, Material Master, and Plant Master tables.

4. Selection Screen

Delivery Number and Delivery Date are mandatory fields on the selection screen

Field	Technical Field	Table
Delivery Number	VBELN(MANDATORY)	LIKP
Delivery Type	LFART(MANDATORY)	LIKP
Delivery Date	LFDAT	LIKP
Customer Number	KUNNR	LIKP
Material Number	MATNR	LIPS
Plant	WERKS	LIPS

5. Tables Used

Table	Description
LIKP	Delivery Header
LIPS	Delivery Item
KNA1	Customer Master
MARA	Material Master
T001W	Plant Master Data

6. Table Relationships

Parent Table	Key Field	Child Table	Key Field
LIKP	VBELN	LIPS	VBELN
LIKP	KUNNR	KNA1	KUNNR
LIPS	MATNR	MARA	MATNR
LIPS	WERKS	T001W	WERKS

7. Processing Logic

1. User executes report.
2. User enter selection criteria.
3. System validates inputs.
4. System fetches Delivery Header.
5. Output is displayed.
6. Create an ABAP report to retrieve data using INNER JOIN or FOR ALL ENTRIES based on the values entered on the selection screen. Implement all standard report events, perform input validation on the selection screen, modularization the logic using subroutines.Display the output using Function ALV.
7. Create another version of the above report by replacing all subroutines with local classes and methods while retaining the same functionality. Display the output using Object-Oriented ALV (OO ALV).
8. Develop a SmartForm to display the data from the final internal table in the required layout.

8. Output Layout

S.No	Field	Source
1	Delivery Number	LIKP
2	Delivery Type	LIKP
3	Delivery Date	LIKP
4	Sales Organization	LIKP
5	Customer Number	LIKP
6	Customer Name	KNA1
7	City	KNA1
8	Region	KNA1
9	Country	KNA1
10	Material Number	LIPS
11	Item Number	LIPS
12	Delivery Quantity	LIPS
13	Unit of Measure	LIPS
14	Material Type	MARA
15	Material Group	MARA

S.No	Field	Source
16	Base Unit of Measure	MARA
17	Plant Code	T001W
18	Plant Name	T001W
19	Valuation Area	T001W
20	Goods Issue Date	LIPS

9. Validations

- **Delivery Document Number** and **Delivery Date** are **mandatory** fields on the selection screen.
- Display an error message if either the Delivery Document Number or Delivery Date is left blank.
- Validate the Delivery Document Number against the **LIKP** table.
- Validate the Customer Number (if entered) against the **KNA1** table.
- Validate the Material Number (if entered) against the **MARA** table.
- Validate the Plant (if entered) against the **T001W** table.
- Validate that the **Delivery Date From** value is not greater than the **Delivery Date To** value.
- Display an appropriate error message for any invalid input values entered on the selection screen.
- If no records are found for the entered selection criteria, display the message:**"No Data Found for the Given Selection Criteria."**

10. Assumptions

- Data is available in standard SAP tables (LIKP, LIPS, KNA1, MARA, T001W.
- Relationships between tables follow standard SAP key structures as listed in Section 6.
- No custom (Z) tables are used; all fields are fetched from standard SAP structures.
- Delivery documents are created correctly in SAP with maintained Customer, Material, and Plant Master data.
- Output is displayed in ALV format; export to Excel, CSV, and PDF is supported via standard ALV functionality.

11. Expected Output

The report displays complete Delivery information – Header, Item, Customer, Material, and Plant details – in a single consolidated output. The report supports execution with or without selection criteria and displays all relevant Delivery records accordingly.
